### Why Choose a Full Throttle Premium AGM Battery?

Today's cars and trucks are being built with more accessories that demand more from the battery than ever before. Full Throttle batteries are designed to exceed these demands with more powerful cranking (CCA) and a higher reserve capacity (RC). All FT batteries are constructed in a tough ABS case and packed tight with thin plate pure lead (TPPL) technology for high cranking output, the highest reserve capacity, and high-compression construction to mitigate against vibration. All in a zero-spill format with no maintenance or corrosion. Full Throttle Series AGM batteries provide a combination of power, stability, and resilience to keep you running in the most extreme conditions.

Having a strong, reliable battery to start and power all your vehicle's electronics is a must-have in today's world. From a tiny BTX9 to a massive 8D, Full Throttle offers the widest range of sizes, including a huge lineup of factory fitments to cover most vehicle needs.

### BUILT BETTER.

- ABS plastic is more rigid than PPE; does not bulge under normal operation.
- Rigid casing - Epoxy sealed case increases PSI limits.
- Pure lead allows for more efficient transfer of electricity during discharge and recharge; less energy lost to heat.
- Over partition welding (OPW) provides greater shock and vibration resistance.
