PREMIUM HIGH-CRANKING AGM BATTERIES

fullriverbattery.com

Why Choose a Full Throttle Premium AGM Battery?

Full Throttle is a true dual-service battery equipped to handle the challenges presented in the backcountry. The TPPL (thin-plate, pure lead) grids provide a burst of energy on demand in hot or cold climates with rapid recharge once the alternator is spinning. The grids are heavily tinned allowing for use in light-duty cycling such as winching, navigation, lighting, and air systems. High compression cells connected with OTP (Over-The-Partition) technology ensure resilience when the road gets bumpy. The hassle-free, zero-spill technology allows for creative mounting, with no corrosion or dangerous gassing.

Our batteries provide high capacity and long cycle life of a true deep cycle battery with all the convenience and benefits of being maintenance-free. Full Throttle sets the standard for AGM in offroad vehicle applications. Whether in the wilderness or out on the road, rest assured your vehicle's uptime will be maximized for years to come when it's powered by a Full Throttle battery.

BUILT BETTER.

- ABS plastic is more rigid than PPE; does not bulge under normal operation.
- Rigid casing - Epoxy sealed case increases PSI limits.
- Pure lead allows for more efficient transfer of electricity during discharge and recharge; less energy lost to heat.
- Over partition welding (OPW) provides greater shock and vibration resistance.
